

Career Objective

Data professional with over 2.6+ years of expertise in Snowflake, SQL, Python, Data Pipelines and cloud platforms like Aws & GCP. Skilled in analyzing complex datasets for business intelligence, as well as automating, designing and orchestrating efficient data pipelines and managing large-scale data infrastructure.

Technical Skills

- **Languages and Scripting:** SQL, Python, Pyspark
- **Databases & Data Warehouses:** Snowflake, Bigquery, Redshift, Oracle, PostgreSQL, MSSQL
- **Data Engineering & ETL Tools:** Data Fusion, Apache Airflow, Cloud Composer, Dataproc, AWS Glue, Dbt
- **Frameworks & Libraries:** Pandas, NumPy, Matplotlib, Snowpark, Streamlit
- **Big Data & Streaming:** Apache Spark, Hadoop, Kafka, Apache Iceberg, Presto/Trino
- **Cloud Platforms:** Google Cloud Platform (GCP), Amazon Web Services (AWS)
- **DevOps & Tools:** Docker, Postman, Excel, Jira, Bitbucket
- **Emerging Skills / Learning:** Generative AI (LLMs, Rag, Embeddings, LangChain, Ollama, n8n, Snowflake’s Cortex)

Professional Experience

Segmetriq Analytics LLP – Mumbai

Snowflake Data Engineer | Nov 2024 – Present

- Worked on a data modernization project by translating Qlik logics into optimized Snowflake SQL and stored procedures to support reporting and dashboards.
- Built a snowflake-native Streamlit application with RBAC-enabled file ingestion, maker–checker approvals, metadata-driven auditing, and versioned data pipelines, delivering secure, traceable, and governed data loads into enterprise target tables.
- Automated multiple Python based Streamlit self-service applications on Snowflake, leveraging dynamic filters and rbac to enable non-technical stakeholders to securely access and analyze data without writing SQL.
- Built a GenAI-based analytics chatbot leveraging Streamlit and Snowflake Cortex LLM that converts natural language queries into sql, securely executes them on snowflake, and generates business data insights.
- Developed Snowflake Stored Procedures to parse complex nested JSON API responses, dynamically flatten hierarchical data, perform schema evolution, and load structured datasets for enterprise reporting and analytics.
- Built scalable Snowflake ML pipelines using Stored Procedures, Snowpark, feature engineering, UDF-based model deployment, and automated scoring to support Pre-Qualified Loan (PQL) solutions across multiple fintech partners.
- Applied Kimball dimensional modeling to design Star Schema data models.

GCP Data Engineer | Apr 2024– Nov 2024

- Developed and optimized complex SQL queries in BigQuery to support business reporting and efficiently resolved support tickets related to database queries, performance issues and data inconsistencies.
- Designed and implemented KPIs for sales and collections, aligning with business requirements.
- Orchestrated workflows with apache airflow, using DAGs for task scheduling and data pipelines.
- Worked on data warehouse solutions in BigQuery to support fraud detection and legal reporting.

Personal Projects

- **Enterprise RAG Pipeline with Snowflake Cortex :** Built an enterprise RAG pipeline on Snowflake Cortex, ingesting multi-domain PDFs through a Bronze/Silver/Gold Medallion architecture, generating embeddings, and enabling semantic search and Q&A via Cortex Search Service.
Implemented agentic document intelligence using Snowflake Cortex with automated Task DAGs, enforcing Row-Level Security and Dynamic Data Masking, and delivering a Streamlit in Snowflake app for secure enterprise knowledge discovery
- **Cloud-Native Modern Lakehouse :** Developed a Dockerized lakehouse stack with PostgreSQL CDC, Kafka, Iceberg on S3, and Trino for fast queries, supported by Hive Metastore and visualized through Superset
- **N8n Automation :** n8n-driven AI chatbot system integrated with SQL databases and vector stores for document-based question answering and intelligent query refinement.

Education

Nitte Meenakshi Institute Of Technology – Bangalore
B.E. in Mechanical Engineering | 2018 – 2022
